Afmetingen	129 × 551 × 165 mm
Gewicht	3,650 kg
Technical information	230 V, 1NPE, 50 Hz CW: 1/2"

Description

This built-in Metos Lom Evo water dispenser allows you to serve your customers chilled carbonated water or chilled tap water. Water dispensing is made easy with the sturdy grips and the upper section that turns 180°. The black appearance of the dispenser and its simple design are suitable for serving lines and hotel reception areas alike.

The carbonic acid cylinder need for operating the device is not included in the unit, as a separate lease agreement has to be made with a gas supplier.

The refrigeration unit for the device (to be ordered separately) is installed within the serving unit, meaning the only visible part is the stylishly designed, piano lacquer finished dispenser with shiny taps, suitable for any venue. The tap outlets are at a height of 322 mm, so pouring water into tall glasses or decanters is easy.

The dispenser is available with two different sizes of refrigeration

units, depending on the capacity of the serving area. The capacity of the Pro2 refrigeration unit is 150 litres of tap water or 90 litres of carbonated water an hour. The capacity of the Pro2 XXL refrigeration unit is 270 litres of tap water or 90 litres of carbonated water an hour.

- cold carbonated water, cold water
- tap outlets at a height of 322 mm
- 180° turning top section
- two taps for water alternatives
- built-in
