Espresso machine Metos Rancilio RS1 2GR

Product information

SKU	4157719
Productnaam	Espresso machine Metos Rancilio RS1 2GR
Afmetingen	800/840 × 463 × 600 mm
Gewicht	85,000 kg
Technical information	380-415 V, 10 A, 5,6 kW, 3NPE, 50/60 Hz, 70 dB CW: 3/8" Drain: ø 27/20

Description

The Metos RS1 is an automatic espresso machine that combines the latest control technology with bold design. The device's clear touch screen and automatic coffee brewing control make it easy to use and helps to make exactly the kind of coffee drink the barista wants. To ensure quality, both coffee groups have their own small auxiliary boilers that guarantee the right extraction temperature in all conditions. The RS1 cooker, lined throughout with stainless steel, represents a modern design with straight lines and accentuated details. The device is designed to be low, so it allows customer service and products to be extended over the cooker as well
Clear, LED-lit buttons and built-in automation make it easy to make specialty coffees. The LCD display on each coffee group tells the user the time (stopwatch) and temperature to complete the dose. The shortcut key allows the barista to deviate from the presets for a single dose, for example when preparing special doses. Device programming is quick with the help of a large touch screen that guides the user. The hot

water tap is operated using two shortcut keys. These can be pre-programmed with two different options, with different dose sizes and temperatures

The large steam tap levers on the side of the appliance and pre-programmable functions make frothing milk quick and safe. Both steam taps can be pre-programmed with steaming functions for two different types of milk, in addition to which continuous steam production is obtained by pushing the lever forward. On top of the device is a cup warmer with railings with five different temperature ranges. The ergonomic design of the filter holders and rubber handles provide a firm grip. Thanks to the weight-balanced design of the handles, they stay firmly in place when tapping.

- stylish inox design
- two coffee groups, two steam taps and a hot water tap
- the instructive touch screen makes programming the device quick and easy
- the low structure allows the beverage to be delivered to the customer over the machine
- cup warmer with five different temperature ranges
- boiler size 11 liters
- the button-operated hot water tap has two options that can be programmed according to temperature and portion size
- programmable steam taps (2 program slots in each tap)
- LED-lit buttons
- two USB ports suitable for charging scales or a phone, for example
- separate gauges for boiler and pump pressures.
- stainless steel frame and linings
- clear and easy to use touch screen
- independent coffee groups
- ergonomically shaped filter holders that provide a firm grip and stay balanced during tapping
- cup warmer

DELIVERY INCLUDES:

- two ergonomically shaped filter holders
