Cooling C3i, ice water, closed circuit Proveno 4G

Product information

SKU	4222952
Productnaam	Cooling C3i, ice water, closed circuit Proveno 4G
Afmetingen	mm
Gewicht	1,500 kg

Description

The Metos Proveno 3G -kettle ice cooling C3i performs the whole cooling of the ice and ice bank with circulating ice water.

The food is cooled from the kettle touch screen, whereby the water begins to circulate between the kettle and the ice bank and the cooling of food is automatically directly to the desired temperature. At the beginning of the cooling the kettle jacket steam is automatically condensed. The ice bank (offered separately) cools the water circulating in the jacket almost to zero. The refrigeration function keeps the desired food temperature, following it in real time throughout the cooling cycle. The food temperature can be monitored on the display and the target temperature can be changed during cooling. It is possible to interrupt the cooling manually. Cooling is interrupted automatically if the product does not cool further. After cooling or maintenance, the cooling water automatically exits into the drain.

The new generation C3i ice cooling cools the food faster and more efficiently.

- factory-installed
- cooling between the kettle and the ice bank with the circulating cooling water
  automatic steam evaporation at the beginning of cooling
- cooling of food directly to the desired temperature
- the target cooking temperature is adjustable
- automatic emptying of cooling water to the drain

THE DELIVERY INCLUDES:
- kettle connections to the ice bank

ACCESSORIES (ordered separately)
- ice bank
